

Optimize Email Governance, Compliance, and Content Protection

Unifying, tracking, controlling, and securing sensitive email communications with Kiteworks

Why Kiteworks Secure Email?

Make sending encrypted, compliant messages and attachments easy from wherever users work, on the web or mobile, in Microsoft 365 or other email systems, or in enterprise applications. The Kiteworks platform automatically applies your governance policies, encryption, and tracks every action in the immutable audit trail you need to prove compliance to auditors.

Keep Secure Email Simple for Users and Recipients

- Automated internal, external, and end-to-end security through an Email Protection Gateway
- Plugins for large file transmission Microsoft Outlook and Office, Google Workspace
- Recipients use their normal business email addresses for authenticated downloads and requested uploads
- Shared mailboxes let service department employees send and receive from a single, governed email address

Govern and Protect Users' Actions Without Getting in Their Way

- Minimize exposure with role-based, granular controls, policy automation, and flexible authentication options
- Utilize comprehensive activity logging and compliance audit reporting
- Protect files up to 16 TB with a hardened virtual appliance utilizing strong encryption in transit and at rest
- Scan incoming emails for malware and outgoing emails with your DLP

Users send and receive securely and simply wherever they work

Admins efficiently reduce risk with role-based, granular controls and automation

Flexible on-premises, single-tenant private cloud, hybrid, and FedRAMP deployment options
