

## Accellion Mobile App for Good

### Accellion Mobile App for Good™ provides secure access to corporate content with application level security policy management.

Organizations today need to maximize the productivity of their mobile workforce while at the same time comply with strict data security and compliance requirements. Achieving both secure business productivity and end-user productivity has proved to be challenging. However, using the Accellion File Sharing Solution, enhanced with Good Dynamics, IT organizations can achieve the best of both worlds.

In partnership with Good Technology, Accellion has leveraged the Good Dynamics security platform to deliver a version of its iOS mobile app, known as **Accellion Mobile App for Good**. The app for iPhone and iPad devices has been integrated with Good Dynamics security libraries to give users easy access to content while also ensuring the highest level of security and control that organizations require.

Accellion Mobile App for Good provides secure mobile access to the Accellion Mobile File Sharing solution which includes secure mobile productivity, access to enterprise content sources, secure file transfer, collaboration, and sync to deliver a robust mobile solution that meets the needs of the most demanding enterprise environments.

#### Accellion Mobile App

The Accellion mobile app enables enterprise users to securely access, edit, review and collaborate on business content from their devices. Within the Accellion Mobile App, users can securely create, edit, view, and collaborate on Microsoft compatible Word, Excel, and PowerPoint files without having to move the data outside of the Accellion secure container. Users can create and edit content online and offline, and then upload files back to their Accellion workspace when online.

The Accellion Mobile App provides secure, real-time mobile access to files stored in SharePoint 2007, 2010, or 2013 and Windows File Shares (CIFS/SMB) using kitepoint™. With kitepoint, users have a central hub for managing and accessing all their enterprise content – across silos of SharePoint sites, Windows File Shares, and other content sources.

#### KEY BENEFITS

- Seamless user experience
- Secure mobile access to enterprise content anytime, anywhere
- Improve business productivity while maintaining security
- Demonstrate FIPS 140-2 compliance
- Separation between personal and corporate App data

#### Good Dynamics

The Accellion Mobile App for Good takes advantage of rich security capabilities found in Good Dynamics security libraries including:

- **User-Level Application Security Policies:** Define and enforce user-level app policies and enable remote-wipe of application data an Admin can remote wipe after a failed number of incorrect passwords.
- **Safely Push Data and Policies to Apps:** An always-on capability, where any developer-specified event (e.g. database entry, appointment, document posting, application policy) is actively transferred by the Good Network Operations Center (NOC) to the mobile application.
- **Secure Network Access:** NOC services encrypted packets only; hence, applications are authenticated and access is granted solely to those provisioned to specific servers and services—thus preventing rogue attacks.
- **Secure Platform:** Strong controls include detection of jail broken phones, and prevention of access to other services.
- **Inter-Application Communication:** Content exchange between Good enabled Apps.

## Accellion Mobile File Sharing and Good Dynamics

The Accellion Mobile App for Good is designed to add application data security and enable granular application management via the Good Dynamics platform. The combined solutions are suited for organizations that need end-to-end data protection and want the added value of maintaining control over the app data on mobile devices.

With the Accellion Mobile App for Good, business users are first authenticated by the Good Dynamics Control server before logging into Accellion. Once a user is securely logged into both environments users can then create, edit, share, view, download, upload and comment on files, while taking advantage of Good Dynamics' strong security features.

**Seamless User Experience:** Create and edit MS Word, PowerPoint and Excel documents, and securely share enterprise content while content policies, and access controls are transparently managed and applied without impeding end-user productivity.

**Secure Content Management:** Access content across files sources including SharePoint and Windows File Shares, while keeping content contained and secured within an IT defined app ecosystem, delivering greater control over content movement between apps.

### KEY FEATURES

- Create and edit Microsoft Office documents from SharePoint and Windows File Shares without a VPN
- App and user level policy enforcement
- Good for Enterprise email integration with Accellion
- FIPS compliance – Data at rest and in transit
- Securely exchange content with other Good Dynamics enabled applications

**GFE Integration:** Good for Enterprise email integration with Accellion to enable the organization and sharing of content.

**FIPS 140-2 Compliant Mobile Container:** With Good Dynamics and Accellion, the mobile app container, including data at rest and in transit is FIPS 140-2 compliant.

**App and User Level Policy Enforcement:** If an app or device policy is violated, or if there is a need to revoke app level access, the app, its container, and all of its contents can be selectively wiped, while keeping other device data intact.

**Separate Personal and Private App Usage:** Prevent cut and paste to unapproved consumer apps; separate work and personal data via the secure mobile container.
