

Accellion Mobile File Sharing Solution Overview

Accellion provides enterprises with powerful, mobile file sharing solutions that offer ubiquitous access to content while ensuring data security and compliance.

Accellion Mobile File Sharing is used by the world's leading corporations and government agencies to enable secure anytime, anywhere access to information on public, private/on-premise and hybrid clouds, while ensuring enterprise security and compliance. Robust features allow users to access and share the latest files and folders on smartphones, tablets, laptops, and desktops. End-to-end security ensures files are synchronized, uploaded, stored, downloaded, and shared securely. Recipients are authenticated, ensuring only the intended recipients can access files.

Flexible Cloud Deployment Options

Accellion offers unparalleled flexibility and scalability to organizations with a few users in a single site to more than 100,000 users across the globe. The solution can be implemented in public, private/on-premise or hybrid clouds. It allows enterprises to leverage NFS/ EMC Atmos storage with their Accellion on-premise system. Organizations can also choose to utilize a FIPS 140-2 Certified module, as well as implement failover, redundancy, and backup recovery.

Only Accellion gives enterprises the flexibility to choose the deployment option that best meets their needs, including an on-premise option to manage and control data in-house.

- Cloud (Private, Public, Hybrid)
 - Private/On-Premise - VMware, Citrix XenServer, Microsoft HyperV
 - Public – Amazon (EC2)
 - Hybrid – Combination of public and private
- FIPS 140-2 Level 1 certified encryption

Mobile Apps

Accellion makes it easy to create and access the latest corporate content anytime, anywhere on leading mobile devices. Native apps for Apple iOS, Android, and BlackBerry mobile devices allow users to easily and securely view, download, save files within 256-bit encrypted container on the device for offline use, create and edit files using Accellion mobile productivity capabilities, upload files, and share files. Users can lock and unlock files to control editing of files in Accellion workspaces and SharePoint. The apps also support bulk upload and

KEY BENEFITS

- Provide secure mobile file sharing for the enterprise
- Single point of access for enterprise content
- Enable cross-organizational secure collaboration
- Quickly and securely store, share, and send information
- Demonstrate compliance with SOX, HIPAA, FDA
- Provide audit trail for files
- Increase data security
- Improve business productivity

download of files. Users can get real-time notifications, provide comments, create and share workspaces, and upload image files to Accellion from the camera roll to easily and securely share via Accellion secure workspaces. They can also open and securely upload files from e-mails and other applications to Accellion workspaces.

Within Accellion Mobile Apps, mobile productivity features allow users to securely create, edit, view, and collaborate on Microsoft Word, Excel, and PowerPoint files without moving data outside of Accellion's secure container. They combine mobile content creation with file sharing.

Accellion mobile combines the ease of use that users need with the IT controls that enterprises require. IT can whitelist applications used to open files from Accellion and configure PIN access to the application. They can use the remote wipe feature to remove content stored in the Accellion secure container when a user leaves the organization or the device is lost/stolen. Accellion also works with MDM partners, such as MobileIron, Good Technology, and Symantec as well as application security technology partners such as Mocana.

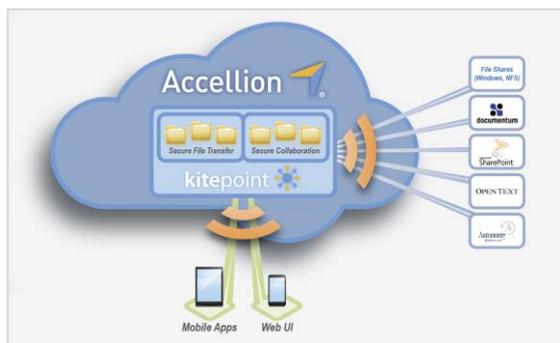

Enterprise Content Mobilization

The Accellion kitepoint feature provides secure mobile access to enterprise content stored in Microsoft® SharePoint 2007, 2010, and 2013, Windows File Shares (CIFS/SMB), and other enterprise content sources – anytime, anywhere, without a VPN. Using the kitepoint feature organizations have a central hub for managing and accessing all their enterprise content – across silos of SharePoint sites, Windows File

Shares, and other content sources. And end users have the ability to add and remove sites without requiring IT.

The kitepoint feature enables true mobile productivity by integrating back-end systems and processes with the devices mobile workers depend on every day. Users can effortlessly download, edit, as well as create MS Office documents on their iPad; and store them back to SharePoint and Windows File Shares with just a few swipes. Users can lock and unlock files to control editing of files in SharePoint. They can securely share files stored on the server with partners and customers, anytime, anywhere. And do it all with the reassurance that IT can maintain control by enforcing security policies across all content stores for auditing, reporting, and compliance.

File Synchronization

Accellion file synchronization enables users to access the latest content anytime, anywhere by combining the ease of use end-users demand with the IT controls, security, and management that enterprises require. With Accellion sync, users have access to their latest content across devices, whether online or offline. Files edited when users are offline are synchronized when users are online again. Users can securely share synchronized files with internal and external recipients through the web interface with files sent as secure links.

Project and Team Collaboration

Accellion collaboration capabilities for project teams, virtual data rooms, and deal rooms enable easy and secure information exchange across corporate boundaries. Users can create as many secure hierarchical workspaces as needed, and then invite internal and external stakeholders to review, comment, update, lock/unlock, synchronize, and share files securely to keep projects moving forward. User permissions can be managed by assigning individuals as Managers, Contributors, Uploaders, and Viewers depending on the privileges required.

The following key features facilitate secure file sharing: mobile file sharing, file syncing, file locking, secure workspaces, secure file transfer, file notifications, comments, track file versions, and search.

Secure File Transfer

Accellion enables users to securely send files and folders of any size to internal and external recipients with comprehensive file tracking and reporting for enterprise data security and compliance. Files are sent as secure links. In addition to supporting file transfers from within Accellion web and mobile app interfaces, Accellion also offers plug-ins for MS Outlook, Lync, and SharePoint, as well as Lotus Notes and iManage.

KEY FEATURES

- Mobile access to enterprise content
- Secure workspaces for file sharing
- Secure file synchronization
- Secure file transfer of files unlimited in size
- File lock/unlock to manage workflow and editing
- Public, private/on-premise, and hybrid cloud
- NFS/EMC Atmos storage support
- Audit trails for files, activity logs for Administrators
- Secure links to access files
- LDAP integration
- Single sign-on through SAML and Kerberos
- Extensible APIs
- Automated file sharing
- Sync client - Windows XP, Windows Vista, Windows 7, and Windows 8, Mac OS 10.6 64-bit and above
- Microsoft Outlook 2007, 2010, and 2013, as well as Office 365 (desktop only) - send files/folders unlimited in size
- Microsoft Lync 2010 Version 4.0
- Microsoft SharePoint 2007, 2010, and 2013 integration

IT Admin and Security Controls

Accellion delivers comprehensive file tracking, reporting, and administrative controls to help organizations manage and control file sharing. Administrators can easily provision users and then centrally manage access rights via LDAP/AD. They can track all user activities such as workspaces created, files uploaded, downloaded, and sent.

Optional Features

Enterprise Plug-ins

Accellion Plug-ins are available for the Microsoft Business Productivity suite including SharePoint, MOC/Lync, and Outlook, as well as Autonomy iManage WorkSite, and Lotus Notes.

Automation

The Accellion Automation Solution Suite automates the flow of digital files across business applications, users, and any combination of application and user. The suite includes Accellion Automation Agents and APIs, Envelope Designer, SMTP Satellite, and SFTP Satellite.

Data Leak Prevention

The Accellion DLP Module enables organizations to not only securely share files, but also monitor and analyze file content based on corporate policies for the protection of IP and compliance requirements. It supports integration with commercially available DLP solutions via the ICAP protocol. Accellion integrates with DLP products from Symantec (Vontu), RSA, Fidelis, Palisades, Websense, and Code Green networks.
