

## SFTP Satellite

### Integrate automated SFTP file transfer with Accellion secure file transfer for enhanced data security, compliance and reduced IT costs.

Accellion provides enterprise-class secure file sharing solutions that enable business users to send files quickly, easily and securely, while giving organizations the security protection they need. The Accellion SFTP Satellite enables integration of automated SFTP file transfers with Accellion secure file transfer enabling elimination of standalone SFTP Servers and consolidation of file transfer tracking and reporting for heightened data security and compliance. Accellion also integrates automated SFTP file transfers to Accellion secure workspaces ensuring organizations can securely share files coming from SFTP Servers.

### Integrated Enterprise-wide File Transfer Management

Many corporations and government agencies utilize automated SFTP processes to share files with external parties such as clients, vendors and partners. These SFTP processes involve customized scripts running on standalone servers and can require significant IT resources to maintain.

With the Accellion SFTP Satellite, organizations can now integrate existing SFTP automated processes into the Accellion secure file sharing solution thereby providing enterprise-wide visibility into all file transfers via centralized Accellion reporting and management tools. The Accellion SFTP Satellite enables organizations to eliminate standalone internal SFTP servers and reduce IT support requirements while preserving the existing SFTP processes with external parties.

For organizations that have existing SFTP processes setup with partners and external parties, switching to Accellion is as easy as re-directing existing SFTP scripts to the Accellion SFTP Satellite and uploading updated keys.

### SFTP to Accellion Secure Workspace

Enterprises rely on Accellion to securely share files with internal and external recipients in secure workspaces. Accellion now allows admins to map SFTP shares to existing top-level workspaces, enabling files to be added to the mapped workspace automatically. This process allows organizations to share SFTP files with workspace members for real-time collaboration. Files added to the workspace do not appear in the SFTP

#### KEY BENEFITS

- Integrates SFTP automated processes into Accellion file transfer for enterprise-wide file transfer management
- Integrates SFTP automated processes into Accellion secure workspaces
- Increases data security
- Achieves compliance with SOX, HIPAA, FDA
- Eliminates standalone SFTP servers
- Reduces IT support

share while files added to an SFTP share can appear in a workspace if mapped by the Accellion admin.

### Benefits and Savings

#### Consolidate secure file transfer into one managed file transfer system for enhanced data security and compliance

With the addition of the Accellion SFTP Satellite corporations and government agencies are now able to consolidate secure file transfer into one secure file transfer solution. SFTP file transfers can now be tracked within Accellion providing streamlined compliance reporting. Accellion auditable file tracking reports can be used to comply with industry and government regulations for securing data in motion and to satisfy security audits.

#### Reduce IT support with centralized enterprise-wide file transfer management

The Accellion administration interface allows easy creation and management of SFTP file shares for automated SFTP file transfers. From within the Accellion Admin interface IT staff can create and manage SFTP file shares and access consolidated tracking and reporting tools. Outside vendors, external partners and clients can redirect their existing scripts to the Accellion SFTP Satellite. Existing partner keys can be loaded into Accellion or new keys can be generated and sent out from the Accellion admin interface.

### Eliminate Standalone SFTP Servers

The Accellion SFTP Satellite is used in conjunction with the Accellion secure file transfer and is available either in a hosted public cloud or private cloud (VM solution with support for VMware, Citrix XenServer and Microsoft HyperV). The Accellion SFTP Satellite eliminates the need for standalone SFTP servers. It is managed using the centralized Accellion Admin Interface and provides the ability to create SFTP File Shares for automated SFTP file transfers.

Using the Accellion SFTP Satellite existing SFTP scripts and automation processes can now be tracked and recorded within Accellion for enhanced data security and compliance.

## KEY FEATURES

### Reporting

Accellion file tracking and reporting allows for easy identification what files have been uploaded or downloaded and by whom, traffic statistics, and number of emails and files sent by user account. The Accellion solution includes reports on workspace activity as well such as files added, deleted, downloaded, comments added, and etc. Log files show activity including who logged in and logged out of the SFTP Satellite.

### Auto Cleanup

Accellion provides auto file cleanup for reduced IT support. The expiration date of files can be set so you don't have to worry about users leaving files that aren't being used anymore. Accounts can be set to expire after a certain number of days of inactivity. You are also able to set a storage cap for users on their file shares.

### Configurable Access Levels for Groups and Individuals

The Accellion SFTP Satellite allows access levels to be set at the individual user level. Users can be granted access privileges to download only or upload and download on a per File Share basis.

### Syslog Integration

Accellion provides the ability to push our logs to your Syslog server for additional reporting and analysis.

## KEY FEATURES

- "Restricted SFTP users" – allow only download privileges to specific users
- Send SFTP shares to workspaces for internal and external sharing
- Invitation email containing generated key
- Automatic deletion of your files
- Auto cleanup of inactive SFTP users
- Reporting on uploads and downloads by user, transfer rates, and login activity.
