

Integrated with Office 365, SharePoint, Azure, and Outlook, kiteworks delivers a secure way to access, edit, and send files stored in multiple content systems

kiteworks provides a complete platform that enables collaboration with external customers and partners, with added protection on top of your existing enterprise on-premises or cloud content.

Key Benefits

- Securely access and edit Office files stored in SharePoint Server On-Premises, SharePoint Online and other sources from a single pane of glass
- Increase business productivity while leveraging Microsoft Office:
 - Microsoft Office 365
 - Microsoft Office Web Apps
 - Microsoft Office for Mobile
- Use Outlook to easily send secure links through kiteworks
- Enable secure cross-organizational collaboration with co-authoring capabilities for mobile and desktop employees
- Provision users based on Active Directory/LDAP groups and kerberos for single sign-on and automated user management to mitigate risk of a data breach
- Available in the Microsoft Azure Marketplace for a secure private cloud deployment option on Microsoft Azure

Built for teams, kiteworks provides the following integrations with Microsoft:

- Microsoft Office 365 for Desktop, Web, and Mobile
- Microsoft Outlook Plug-In
- Microsoft SharePoint (2007, 2010, and 2013) and SharePoint Online
- Microsoft Azure Cloud

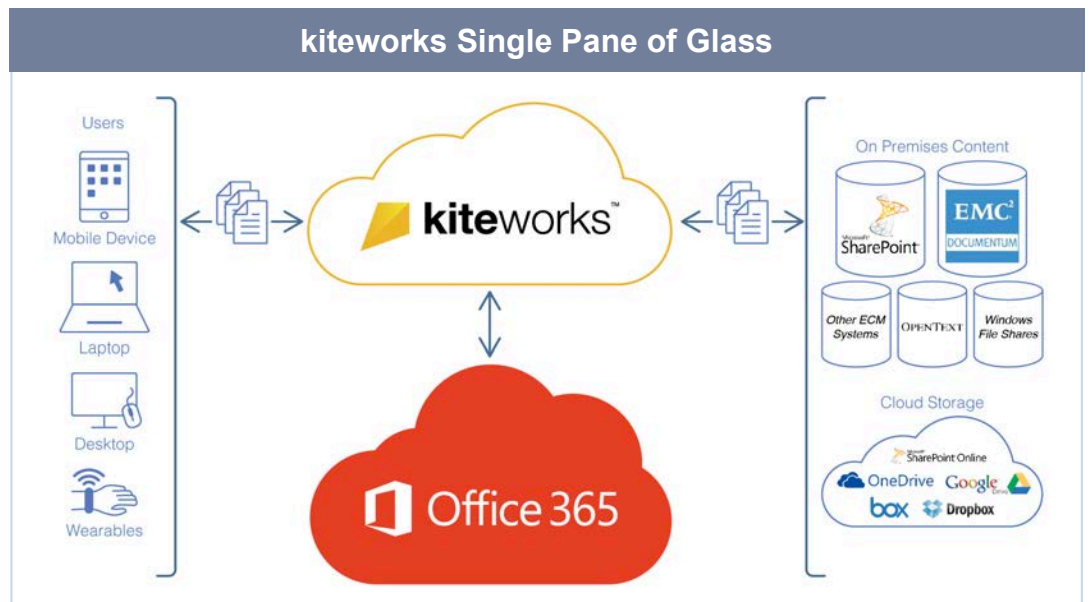

Microsoft Office 365

Streamline collaboration around files and documents by combining the power of Microsoft Office 365 with the kiteworks secure content platform. kiteworks provides a private cloud architecture designed to securely access and share all of your on-premises and cloud storage Office files securely from PCs and Macs, phones/tablets, and web browsers. You can search for a file stored in SharePoint then open and edit the file using Word, PowerPoint or Excel, and seamlessly save it back to its original location. Eliminate the hassle of downloading, editing and uploading files. As you edit files, you can even collaborate with others in real-time, watching them make changes, as you continue to make yours. Easily send files to others using our secure links or create restricted, sharable folders.

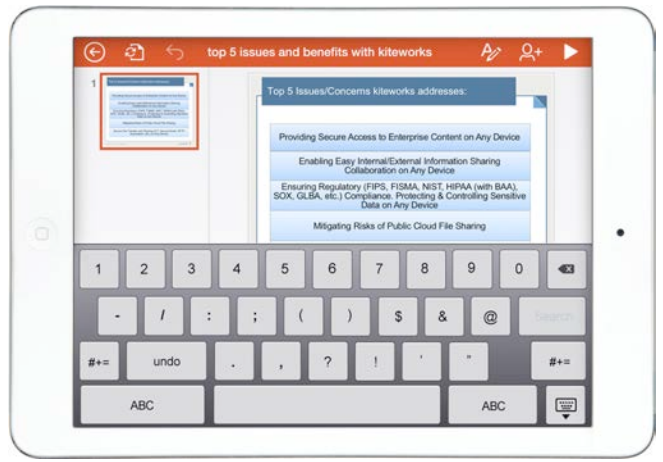

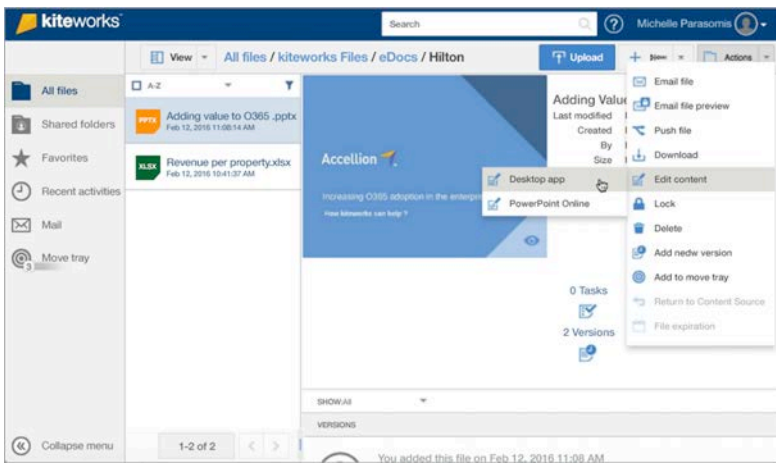

Single Pane of Glass to SharePoint, Windows File Shares and other Content Systems

The kiteworks Secure Content Platform extends Office 365 connectivity to other content systems such as ECMs (Enterprise Content Management) systems, cloud storage, and file systems, through a "single pane of glass".

Access to SharePoint on-premises servers (SharePoint 2007, 2010, 2013) and SharePoint Online allows end users to access files from these data sources without a VPN. Users can securely preview, search, check-in/check-out, download, upload new versions, and create or edit Microsoft Office documents. This is especially useful for external collaboration on SharePoint content, or mobile users

Edit SharePoint On-Premise Server Files from Desktop, Web, Mobile

who previously struggled to gain access to SharePoint files stored behind the firewall.

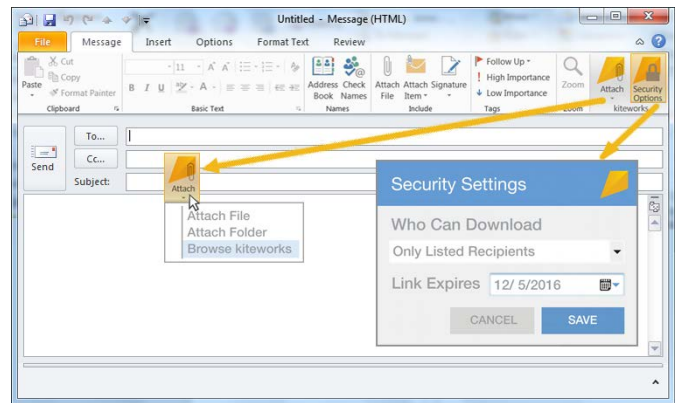

Viewable through a single folder structure, full content search capabilities allow users to efficiently search for content filtered by file/folder name, author, time, as well as file type and file size. A SharePoint plug-in is also available that can be installed on SharePoint servers to empower SharePoint users to send files securely, or add files to kiteworks for secure collaboration.

Secure File Sharing

End users can access and share Office files through the kiteworks secure content platform via the web, desktop, and mobile clients, SFTP, and APIs. Office files from connected content systems can also be accessed via kiteworks and access options can be customized for internal and external users at the user profile and folder levels, providing access control of documents for full control. Through the Admin Portal, administrators can customize account settings, file filters, send file settings, and assign access roles based on standard, restricted, and recipient user profiles. kiteworks supports the sharing of unlimited-size files and a variety of application, audio, document, image, text, video, and custom file type extensions can be blacklisted. Single sign-on is supported: administrators can perform SSO setup in the Admin Portal by choosing SAML2.0 or Kerberos. kiteworks has robust file access preferences within the Admin Portal to control access to, requesting of, sharing of, and movement of data to mitigate risks. Integrations with AD/LDAP, SSO, DLP, MDM, two factor authentication, and SFTP are also provided to leverage your existing investments for that added level of security

Microsoft Outlook Plug-In

Outlook users can attach files or folders with kiteworks connected to the kiteworks platform to an email. Users don't need to leave Outlook to send a file that is stored in kiteworks, and replying to Outlook emails with protected files attachments is made easy. Both the attachments and the message body itself is securely uploaded to the kiteworks server and the email is delivered with a secure link. The recipient clicks on the link to download the contents. Additional security is provided with options to control whether recipients can forward the folders/files and the expiration date of the secure link.

Microsoft Outlook Plugin

Microsoft Azure

kiteworks is offered in the Microsoft Azure Marketplace for a secure, private-cloud deployment option. By combining kiteworks and Azure, your mission-critical, confidential data can be fully protected with the strength of Microsoft and Accellion.

About Accellion

Accellion, Inc. provides secure access to enterprise content wherever it is stored to enable increased enterprise productivity and ensure data security and compliance. Accellion, Inc. is the leading provider of private cloud solutions offering enterprise organizations the scalability, flexibility, control and security to enable a global workforce with the tools they need to securely create, access and share information, wherever work takes them. Accellion solutions are used by more than 15 million users and 2,500 of the world's leading corporations and government agencies including Procter & Gamble; Indiana University Health; Kaiser Permanente; Hogan Lovells; Bridgestone; Harvard University; US Securities and Exchange Commission; and NASA.
